365mesh
powered by Outcomex

365mesh is an end-to-end IoT solutions tailored to meet unique industry needs, across multiple industries. Our solutions aims to assist businesses with data collection, monitoring and automation, gaining visibility across their business, increase operational efficiency and cost savings as well as day-to-day management.

WHAT MAKES US DIFFERENT:

- Our organisation has over a decade of experience in networking technologies and security, which form an integral part of the underlying architecture required for IoT networks. Our extensive network engineering capabilities give us a unique ability to understand and deploy every component of an IoT network.

- We have developed a quality assurance program for the IoT sensors; analysing factors such as their range, sensitivity, battery life, security, manufacturing quality, dust and water proofing, and ease of integration. Every sensor recommended by 365mesh has been selected following this program which ensures they are secure and follow best practice design principles.

- 365mesh has been developed in Australia and our team of engineers provide installation and support services nationally, including in rural areas.

- 365mesh solution is located onshore, with local teams available for onsite installations, support and managed services. Working with one provider ensures our customers have a complete IoT solution on a single, comprehensive platform. This means better support and potential cost savings.

DELIVERING END-TO-END IOT SOLUTIONS

PHASE 1	PHASE 2	PHASE 3	PHASE 4
Sensors/ Devices	**Network and Connectivity**	**Data Processing**	**User Platform**
Installing sensors to collect data from your environment	Deploying and/or managing your network to connect the sensors to the cloud	Converting raw data into meaningful information	Offering visibility on your environment and tasks automation through our industry specific application powered by 365mesh

End-to-end Security | Analytics and Artificial Intelligence | Predictive Behaviours

CATERING TO DIFFERENT INDUSTRIES THROUGH THE 365MESH PLATFORM

The 365mesh range of Internet of Things solutions provides a wealth of use cases, that can be tailored to any industry. Start with cameras and sensors, and 365mesh will provide the connectivity and networking to fuel your IoT journey. Our AI-powered analytics engine transforms your data into meaningful insights, presented in a user-friendly application.

Healthcare and aged care
Meet patient needs proactively, increase effective medical interaction and create more efficient operations

Industrial and manufacturing
Facilitate efficient production flow, manage inventory, and increase plant safety

Mining, oil and gas
Optimise processes and equipment while providing a safer and healthier work environment

Utilities, energy and water
Find solutions for utility issues before they happen, reduce wastage, and improve cost-saving

Education
Create a conductive learning atmosphere across schools and universities

Ocean and marine
Create streamlined operations and supply chain management, security and maintenance

Corporate office workspace
Gain visibility into office activities and utilisation with non-disruptive IoT adoption

Transport and logistics
Enhance surveillance and security measures, improve supply chain management, and optimise inventory

Agriculture and farming
Increase operational efficiency and cost savings, making farm management a whole lot easier

Smart cities and buildings
Make daily activities, such as commuting, simpler and more effective while improving quality of life
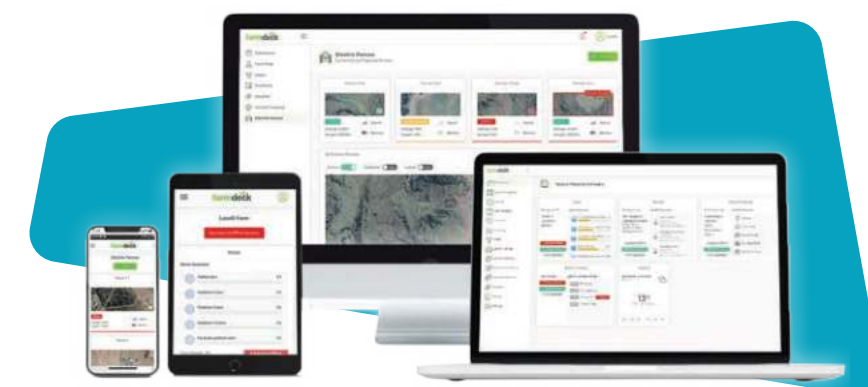

Retail and food
Improve retail and food safety and efficiency, while gaining visibility into patron experience

Parks and wildlife
Ensure park safety while protecting wildlife and optimising maintenance

Get better visibility on what is happening in your business through a custom IoT portal.
