FoodDeck is an all-in-one Internet of Things (IoT) solution developed for restaurants and food preparation businesses, with specific features that address key areas of your operations. With sensors and devices, network and connectivity, data processing, and a user application, FoodDeck is a complete IoT solution.

### WHAT MAKES US DIFFERENT:

- Our organisation has over a decade of experience in networking technologies and security, which form an integral part of the underlying architecture required for IoT networks. Our extensive network engineering capabilities give us a unique ability to understand and deploy every component of an IoT network.
- We have developed a quality assurance program for the IoT sensors; analysing factors such as their range, sensitivity, battery life, security, manufacturing quality, dust and water proofing, and ease of integration. Every sensor recommended in FoodDeck has been selected following this program which ensures they are secure and follow best practice design principles.
- FoodDeck has been developed in Australia and our team of engineers provide installation and support services nationally.
- FoodDeck also assists businesses with industry compliance standards and food safety regulations.
- FoodDeck provides a private network solely for businesses and all data is kept within Australia.

### DELIVERING END-TO-END IOT SOLUTIONS

PHASE 1	PHASE 2	PHASE 3	PHASE 4
<b>Sensors/ Devices</b>  Installing sensors to collect data from your environment	<b>Network and Connectivity</b>  Deploying and/or managing your network to connect the sensors to the cloud	<b>Data Processing</b>  Converting raw data into meaningful information	<b>User Platform</b>  Offering visibility on your environment and tasks automation through our FoodDeck application

End-to-end Security | Analytics and Artificial Intelligence | Predictive Behaviours

### ACCESS ALL FOODDECK FEATURES THROUGH THE DASHBOARD

All our features are presented centrally on a user-friendly dashboard and can be accessed remotely via a web browser. FoodDeck gives you the possibility to configure alerts and notifications, as well as reports for each feature.

**Cold Room and Freezers**

Monitors temperatures, humidity in regards to the food stored in freezers, refrigerators and cold rooms.

**Waste Management**

Capture data in remote locations, improve inventory control, like recognising when bins need to be emptied, and validate the success of recycling programs.

**Liquid Spillage**

Monitors and alerts liquid spillage autonomously, maintaining safety and OHS standards.

**Drive-thru Smart Parking Bays**

Manages cars waiting for their drive-thru orders.

**People/Vehicle Counting**

Counts vehicles, pedestrians and dwell times with facial recognition capabilities.

**Security and Surveillances**

Surveillances and detects people in unauthorised areas, or at locations after hours.

**Generate Reports**

Generates and exports reports required for industry compliance purposes and audits.

**Environment Monitoring**

Measures and alerts on air quality, noise levels, light quality, OHS parameters.

Get better visibility on what is happening in your business through a custom IoT portal.
