HealthDeck is an end-to-end IoT management solution for the health industry. Our solution aims to assist clinics improve aspects such as emergency room wait times, inventory management, as well as day-to-day management.

WHAT MAKES US DIFFERENT:

- Our organisation has over a decade of experience in networking technologies and security, which form an integral part of the underlying architecture required for IoT networks. Our extensive network engineering capabilities give us a unique ability to understand and deploy every component of an IoT network.
- We have developed a quality assurance program for the IoT sensors; analysing factors such as their range, sensitivity, battery life, security, manufacturing quality, dust and water proofing, and ease of integration. Every sensor recommended in HealthDeck has been selected following this program which ensures they are secure and follow best practice design principles.
- HealthDeck has been developed in Australia and our team of engineers provide installation and support services nationally, including in rural areas.
- HealthDeck provides a private network solely for businesses and all data is kept within Australia.

DELIVERING END-TO-END IOT SOLUTIONS

PHASE 1	PHASE 2	PHASE 3	PHASE 4
Sensors/ Devices	Network and Connectivity	Data Processing	User Platform
Installing sensors to collect data from your environment	Deploying and/or managing your network to connect the sensors to the cloud	Converting raw data into meaningful information	Offering visibility on your environment and tasks automation through our FoodDeck application

End-to-end Security | Analytics and Artificial Intelligence | Predictive Behaviours

ACCESS ALL HEALTHDECK FEATURES THROUGH THE DASHBOARD

All our features are presented centrally on a user-friendly dashboard and can be accessed remotely via a web browser. HealthDeck gives you the possibility to configure alerts and notifications, as well as reports for each feature.

People/Vehicle Counting

Get to know how and when your facilities are accessed and create comfortable and safe experiences.

Energy Consumption

Understand how your facilities and appliances drive energy consumption at your hospital or clinic.

Environment Monitoring

Collect data about noise, humidity, and harmful chemicals to create a safe environment.

Cold Room and Freezers

Maintain high safety standards through monitoring and alerting of food, medicines, and samples.

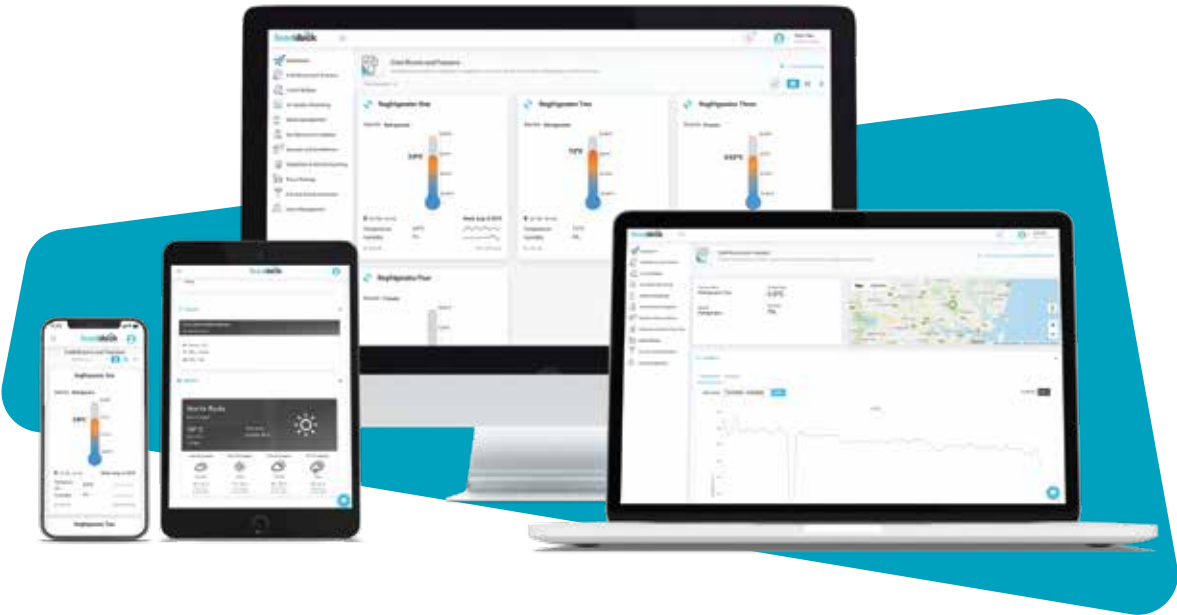

Security and Surveillances

Utilise cameras to monitor and detect people in unauthorised areas, or at locations after hours.

Generate Reports

Generate and export reports required for industry compliance purposes and audits.

Get better visibility on what is happening in your business through a custom IoT portal.
